Numetrics Closes 2008 with Seventh Consecutive Year of Record Sales

Effective schedule planning and industry benchmarking influence product strategy and execution in challenging economic times

Cupertino, CA – March 24, 2009 — Numetrics Management Systems, Inc., the semiconductor industry’s leading supplier of enterprise resource planning (ERP) tools for semiconductor R&D organizations, announced today that the company had achieved its seventh consecutive year of record bookings and revenue, while maintaining profitability. A major contribution to 2008 sales came from multi-year contract renewals by tier-one customers in North America.

During 2008, Numetrics introduced its eighth generation complexity model, the patented method for quantifying the complexity of an integrated circuit. The software-enabled technique allows semiconductor and electronic systems companies to assess at a very early stage the staffing and schedule necessary to develop new IC products, a critical step to aligning projects to the capacity of the development organization.

Numetrics President & CEO Ron Collett commented, “During this economic downturn, our customers have told us that we are an essential part of their portfolio realignment process, that they are using the output to drive for higher

organizational efficiency and productivity. We are proud to have become an integral part of our customers' business process, as they align themselves with new economic realities."
